

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

Claims 1-43. (Canceled).

Claim 44. (New) A target binding protein, comprising (a) a first polypeptide comprising a first single chain Fv binding site (scFv) joined by a linker to the CL of a VL-CL immunoglobulin domain and (b) a second polypeptide comprising a second single chain Fv binding site (scFv) joined by a linker to the CH of a VH-CH1 immunoglobulin domain, wherein the first and second scFv each form two target binding sites independently, and wherein the VL-CL-linker-scFv associates with the VL-CH1-linker-scFv to form a third Fv binding site;

- i. wherein the CL of the third binding site is those of human kappa or lambda,
- ii. wherein the CH1 of the third binding site is those of human IgG1, and
- iii. wherein the first polypeptide and second polypeptide are joined by a S-S bond between the CL of the third binding site, and the linker of the second polypeptide, and wherein cysteine is the fifth amino acid of the second polypeptide linker joined to the carboxyl terminal of CH1 of the third binding site.

Claim 45. (New) The target binding protein of claim 1, wherein the first amino acids of the linker joined to the carboxyl terminal of CH1 of the third binding site are EPKSC.

Claim 46. (New) The target binding protein of claim 1, wherein the three binding sites are to the same epitope.

Claim 47. (New) The target binding protein of claim 1, wherein two of the binding sites are the same, and the third is to a different epitope.

Claim 48. (New) The target binding protein of claim 1, wherein the three binding sites are to different epitopes.
